WHAT AEGIS IS

Contract lifecycle management, with AI built into every step.

Aegis is a contract-first legal platform. You bring contracts in, and Aegis reviews them for risk, checks them against your negotiation playbooks, routes them for approval and signature, then tracks the obligations and renewals that follow. The same intelligence is available right inside Microsoft Word through the Aegis add-in — so reviewing and redlining never means leaving your document.

THE CONTRACT LIFECYCLE

Every contract moves through seven stages

Good to know: Active contracts approaching expiry are flagged **renewal due**, and closed contracts can be **archived** — retained for compliance but out of the way. You'll see these stages everywhere: on the Hub board, in filters, and on each contract's progress stepper.

GETTING STARTED

01 · Signing in

Your entry point to the workspace — sign in, or get set up for the first time.

1

Login & first-time setup

The door to your organization's workspace

</login>

Sign in with your work email and password. New organizations bootstrap a first admin; teammates join by invitation. There's also a no-backend demo mode to explore Aegis with sample data.

- ✓ **Sign in** with email & password
- ✓ **Request access** (admin approval)
- ✓ **Create an organization** via setup token
- ✓ **Accept an invitation** at </invitations/accept>

You'll land on "Ask Aegis," your home base. The left sidebar is always there to move between every area of the product.

ORIENTATION

02 · The workspace & navigation

A persistent left sidebar groups everything into four simple bands.

WORKSPACE

Ask Aegis · home AI assistant
Contract Hub · your whole portfolio
Projects · deal rooms & matters
Search · find anything, anywhere

INTELLIGENCE

Contract Brain · portfolio-wide Q&A
Tabular Review · extract across many contracts
Playbooks · negotiation rulebooks
Workflows · custom automations

LIFECYCLE

Approvals · multi-step sign-off
Signatures · e-signature envelopes
Obligations · tasks & deadlines
Renewals · expirations & decisions

OPERATE

Notifications · alerts & email log
Jobs · background task monitor
Admin & settings · org, users, integrations
Account menu · profile & sign out

03 · Ask Aegis – the AI assistant

Your home screen: a chat-style assistant that understands your contracts.

3

Ask Aegis AI

Natural-language questions, cited answers

/ · /assistant

Ask anything about your contracts in plain language and get a streamed answer with citations back to the source documents. Scope a conversation to your whole portfolio, a single project, or one contract — and the assistant can call tools (find contracts, extract clauses, look up obligations) to answer.

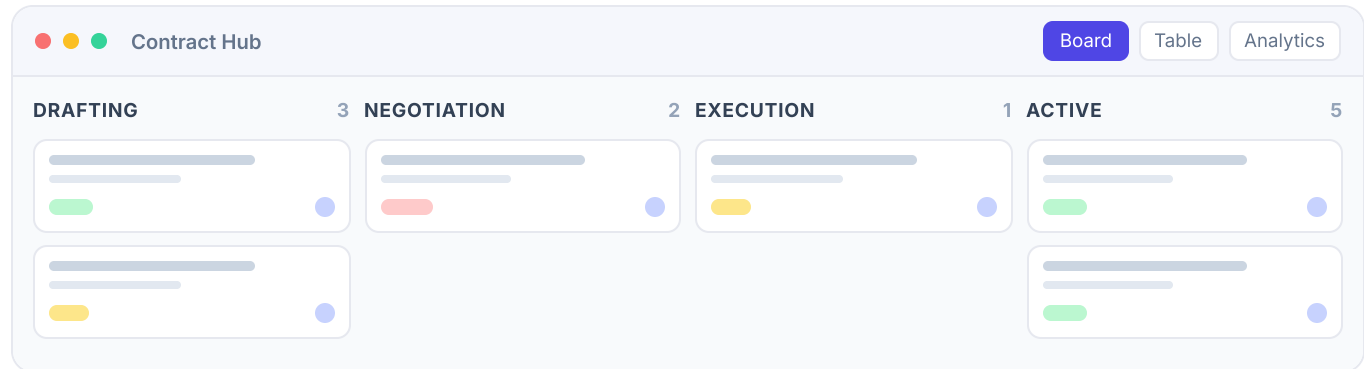

- ✓ Ask in **natural language**
- ✓ Scope to **portfolio, project or contract**
- ✓ Get **streamed answers** with sources
- ✓ Confirm **sensitive actions** before they run

Try asking: "Which active contracts allow termination for convenience?" or "Summarize our exposure on the Acme MSA."

04 · Contract Hub

The command center for your entire contract portfolio — three views, one place.

See every contract and move it forward. Switch between a Kanban **Board**, a spreadsheet-style **Table**, and an executive **Analytics** dashboard. Filter to *Mine*, *At-risk*, *Redlines*, *Expiring* or *Deviations*, and upload or create new contracts that auto-extract their own metadata.

- ✓ **Drag** contracts across lifecycle lanes
- ✓ **Analytics**: value, risk mix, bottlenecks
- ✓ **Upload / create** a new contract
- ✓ **Renewal pipeline** & "action required" queue

05 · The contract workspace

Where the real work happens — the document on the left, smart side panels on the right.

5

Contract detail

Review · redline · negotiate · progress the stage

/contracts/{id}

Open any contract to read the document alongside everything that surrounds it. A lifecycle stepper tracks progress, and a “next step” hero tells you exactly what to do — *Run AI review, Resolve issues, Submit for approval, Send for signature*. Five panels do the heavy lifting:

Acme Master Services Agreement · Review

Redlines

Versions

Comments

HIGH

Uncapped liability

...liable for all damages without limit...

...liability capped at fees paid in 12 months...

Apply

Accept

Reject

✓ Redlines — accept / reject tracked changes

✓ Versions — full history & side-by-side diff

✓ Comments — internal or shared-with-counterparty

✓ Negotiation — secure share links & rounds

✓ Ask AI — review & Q&A on this contract

✓ Metadata — counterparty, value, risk, stage

Send to counterparty

generates a secure, optionally pass-coded link (see /s/{token}) so the other side can view and comment without an account — and you can diff their version against your last send.

06 · Playbooks

Turn your negotiation standards into rules Aegis can check automatically.

A playbook is a set of clause-level rules — your preferred position, prohibited language, required terms and negotiation guidance. Create one by hand, or use the interactive AI builder: attach an exemplar contract or template, then chat to refine ("be strict on liability," "we're the vendor"). When you run a playbook against a contract, Aegis surfaces **deviations** and proposes redlines to bring it back in line.

- ✓ **Generate** a playbook from an exemplar with AI
- ✓ **Publish** versions; keep a clean history
- ✓ **Run** against a contract → deviations + fixes
- ✓ **Insights** — which clauses deviate most often

07 · Approvals

Route a contract to the right people, automatically, before it can be signed.

7

Approvals

Requests · Routing rules · Approver groups

[/approvals](#) · [/approve/{token}](#)

Define routing rules that match contracts by type, value and risk, then send them to the right approver group in sequence — any-one or all-must-approve. Approvers decide in-app, or via a one-time email link with no login required. On final approval, the contract advances toward signature.

- ✓ **Requests** — approve / reject with a comment
- ✓ **Routing rules** — criteria → approver chain
- ✓ **Approver groups** — e.g. Senior Counsel, Finance
- ✓ **Email decisions** via secure token links

8

Signatures

Send for e-signature & track to completion

[/signatures](#)

Send the authoritative version for e-signature (DocuSign), assign signers and fields, and set a deadline. Track each envelope as it moves *Sent* → *Viewed* → *Signed* → *Completed*, with status synced automatically. When everyone has signed, the contract advances to **Active**.

- ✓ **Send** to recipients with fields & deadline
- ✓ **Track** envelope & per-signer progress
- ✓ **Resend, void** or cancel envelopes
- ✓ **Download** signed PDF & audit trail

09 · Obligations & 10 · Renewals

Once a contract is live, Aegis keeps you ahead of every deadline and expiry.

9

Obligations

Deadlines, payments & duties — tracked

[/obligations](#)

Obligations are pulled from contract clauses (or added by hand) and tracked to completion, colour-coded by status. Aegis emails owners ahead of due dates so nothing slips.

- ✓ Filter by **open** · **due soon** · **overdue** · **done**
- ✓ **Automated reminders** (5-day / 1-day)
- ✓ **Mark complete** or reschedule
- ✓ Jump to the **source clause** & contract

10

Renewals

Never miss a notice window

[/renewals](#)

Aegis watches expiry and notice windows and flags contracts as **renewal due**. Decide to renew, renegotiate or terminate — with the value at stake bucketed by 30 / 60 / 90 days so you can prioritise.

- ✓ See **upcoming renewals** by notice date
- ✓ Record a **decision** + memo
- ✓ **Window check** auto-detects due renewals
- ✓ **\$ at stake** by time window

INTELLIGENCE

11 · Contract Brain & 12 · Tabular Review

Two ways to ask questions of *many* contracts at once.

11 Contract Brain AI

Portfolio-wide Q&A with citations

[/brain](#)

Ask questions across your whole portfolio — or scope to a project or contract — and get an answer grounded in specific documents. Counting questions are answered straight from the database (no guesswork); text questions use retrieval over your clause library, every answer backed by citations.

Ask: "How many vendor contracts have a 2-year initial term?" · "List every limitation-of-liability clause we've agreed above our cap."

12 Tabular Review AI

A spreadsheet, filled in by AI

[/tabular-reviews](#)

Pick a set of contracts and define the columns you care about (Liability cap, Term, Renewal clause...). Aegis extracts each value for every contract — rows are contracts, columns are your questions — and flags cells that need a human look. Export the finished grid to spreadsheet.

✓ Select contracts & define **columns**

✓ Watch cells fill in as **jobs complete**

✓ **Chat** to refine within the review

✓ **Export** the results table

ORGANIZE

13 · Search, Projects & Workflows

Find anything, group your work, and standardize how it gets done.

13 Search

Global search across **contracts**, **full text**, **clauses** and **projects** — filter by stage, risk and counterparty, and jump straight to the source.

[/search](#)

Projects

Group contracts into **deal rooms & matters** (review, due-diligence, regulatory). Add members, share access, and get project-level insights.

[/projects](#)

Workflows

Built-in and custom **automation templates** (intake, review, drafting, tabular). Set visibility — private, shared, or org-wide.

[/workflows](#)

OPERATE

14 · Admin, Jobs & Notifications

Run the workspace: people & access, background processing, and a full audit of what was sent.

14 Admin & settings

Manage the **organization, users & roles, invitations, API keys** and **integrations** (e-signature, storage).

</admin>

Jobs

Monitor background work — extraction, embeddings, reminders. **Cancel** or **re-run**; auto-refreshes live.

</jobs>

Notifications

A complete **log of every alert & email** — event, channel, delivery status and timestamp.

</notifications>

15 · The Microsoft Word add-in

All of Aegis's intelligence, in a task pane next to your contract — review and redline without ever leaving Word.

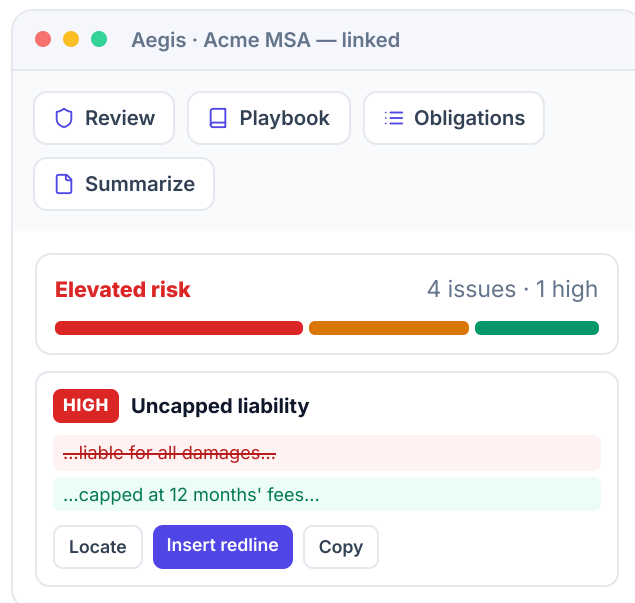

15

Ask Aegis for Word AI

Sign in · auto-link · review · redline · save versions

Word · task pane

Open the Aegis pane in Word and sign in once. The add-in **auto-links** the open document to its contract in Aegis (matching by content, or creating a new one), so everything you do stays connected to the record. Four quick actions sit a click away.

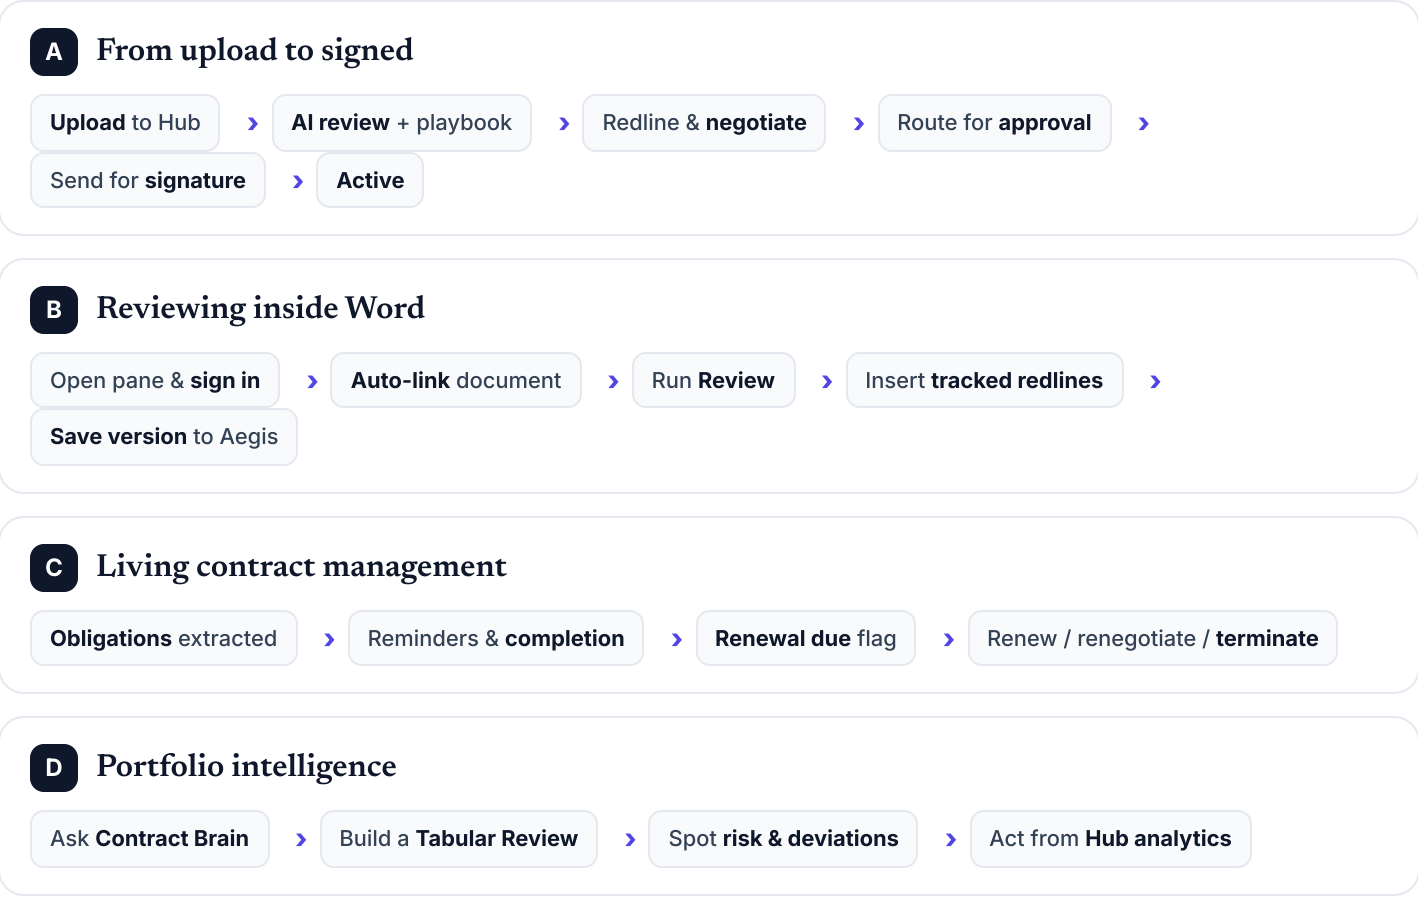

- ✓ **Review** — ranked findings with severity, the issue, and suggested wording
- ✓ **Playbook** — pick a playbook; get deviations & fixes for this document
- ✓ **Obligations & Summarize** — one-click extraction and a concise brief
- ✓ **Ask anything** — free-form questions about the open contract
- ✓ **Locate & redline** — jump to a clause; apply fixes as tracked changes
- ✓ **Save a version** — push the current draft back to Aegis

Redlines flow both ways. Suggestions from a review or playbook can be inserted into Word as tracked changes, and the contract's proposed redlines can be **accepted or rejected** right from the pane — keeping Word and Aegis perfectly in sync.

PUTTING IT TOGETHER

16 · End-to-end journeys

How the pieces connect across a contract's life.

QUICK REFERENCE

Every capability at a glance

CAPABILITY	WHAT YOU DO	WHAT YOU GET BACK
Ask Aegis	Ask a question (any scope)	Cited, streamed answer from your contracts
Contract Hub	Board / table / analytics, drag stages	Portfolio status & one-click new contracts
Contract review	Run AI review on a contract	Ranked risk findings with suggested redlines
Playbooks	Run a playbook against a contract	Deviations from house positions + fixes
Approvals	Submit for sign-off	Auto-routed chain; in-app or email decisions
Signatures	Send for e-signature	Tracked envelope; auto-activates when signed
Obligations	Track duties & deadlines	Reminders and live status per obligation

CAPABILITY	WHAT YOU DO	WHAT YOU GET BACK
Renewals	Review the renewal window	Decision capture with value at stake
Contract Brain	Ask across the portfolio	Synthesised answer with citations
Tabular Review	Define contracts x columns	A filled grid, exportable
Word add-in	Review & redline in Word	Tracked changes synced back to Aegis

YOU'VE SEEN THE WHOLE TOUR

One platform, from first draft to renewal.

Aegis brings AI review, negotiation playbooks, approvals, e-signature and obligation tracking into a single contract-first workflow — and meets your team where they already work, inside Microsoft Word.
